

LEGATUS USER MANUAL

Thank you for purchasing Alexandria Audio Legatus! Please read this manual carefully before using it.

Positioning your Legatus

Please place Nero on a flat, rigid surface floor, if there is a carpet, then use a Platform. Be sure the four rubber feet of Legatus are centrally positioned in depth and width. The feet may appear as simple rubber, but we choose it for optimal performance. Do not adjust the torque of any bolts including the feet because we have also fine tuned the torque of each bolts for optimal resonance and performance.

Connecting your Legatus

Connect your RCA/XLR from Preamp to the Legatus Inputs.

Connect the Power Cord

Connect The Power Cord of Legatus in the Same Power Strip (Unfiltered) used your Hifi System at the last position in the power strip after your preamp. We strongly suggested to use the supplied power cord and don't replace it with anything else. It's the best matching cord we've found for Legatus. Please check the polarity between Live phase and Neutral is correct, not reversed. This will result in a weaker electrical field around the power supply inside Legatus, which improves sound quality.

Ready to Use

Please turn on The Legatus, when it will go the warm up state as needed up to 30 seconds. The front LED will lighten up when its ready to use.

We hope you will enjoy listening to music with your Legatus Amplifier! If you any question or concern, please contact your retailer or Alexandria Audio
